

A paper guaranteed to perform, however you print, every day, every job.

Developed especially for today's rapidly growing digital print market, our versatile Digital Coated papers suit a variety of applications. Exceptionally smooth printing surfaces, superior gloss, high opacity and excellent body deliver true color reproduction plus outstanding runnability and bindery performance. Guaranteed for offset, dry toner/laser and HP Indigo printing platforms.

Digital Coated® Gloss

Gloss coated paper has a high sheen. It reflects light rays right back at the light source. Gloss papers have less bulk and opacity than dull paper of equal basis weight. Gloss coatings reduce ink absorption, which give the sheet an excellent color definition. It is well suited for large images with little text.

Digital Coated® Dull

A dull finish coated paper is a smooth surface paper that is low in gloss. Light rays are dispersed rather than reflected directly back at the light source. Less light glare; improves legibility and ease of reading. It is well suited for detailed, crisp printing without sacrificing the ability to easily write on it.
