MULTIPURPOSE REMOVABLE PRESSURE
SENSITIVE TEXTURED VINYL

One product, endless applications. Create floor, wall and window graphics with one universal media ... Trifecta®.

6 mil semi-rigid matte white textured facestock

High opacity film with an excellent white point

Universal removable adhesive that will cleanly remove from indoor and outdoor applications for <6 months

Stable 90# layflat polycoated paper liner for ease of printing and installation

ASTM E84 Class 1 or A rating

Print Compatibility: Wide Format (Solvent, Eco-Solvent, Latex and UV), UV Offset and Screen

When to use Trifecta

One-Step Floor Graphics - Create UL 410 slip resistant floor graphics in one easy step... no overlamine required. Easy to install and remove. Trifecta® is suitable for indoor short term floor graphics (<6 months). **Not intended for outdoor floor graphic applications. For best results, we recommend printing floor graphics with UV inks to avoid potential scuffing.*

Wall Graphics - Hassle free textured wall decals - peel, stick, done. No need for tapes, tacks or nails and will remove cleanly from painted dry wall.

Window Graphics - Enhance the look of standard window graphics with a dimensional, textured finish. Perfect for short term decorative window decals smaller than 2' x 2'.

Peel is defined as the average force to part two bonded materials. We use ASTM D3330, 180 degree peel test method for our adhesive values. Adhesion values will vary depending on substrates but as a general guideline in our descriptions, the terms low, moderate and high peel relate to the following as measure on stainless steel with 15 min dwell time:
Low Peel: <10 oz/in | *Moderate:* 10 – 20 oz/in | *High Peel:* >20 oz/in

Tack is the property of an adhesive that allows it to adhere to another surface on immediate contact. It is the "stickiness" of the adhesive while in a fluid (e.g., paper cement) or semi-fluid (e.g., pressure sensitive adhesive) state. The descriptors low, moderate and high tack are relative terms; they are used to indicate how easily a film may be repositionable (where low is easy and high is not) or how quickly a film will bond with the surface (where low is slow and high is fast).
