

TEXTILE SCREEN & HEAT TRANSFER TAPES

TEXTILE , SCREEN PRINTING,
& TRANSFER TAPE

Whether you're screen printing or decorating garments, RTape has a specialty tape to make your job faster, easier, and trouble free.

Blue Block Out™

Blue Block Out™ tape is a self wound polyethylene film tape coated with an aggressive adhesive. Its water based adhesive resists attacks by inks and solvents, and withstands multiple pressure washes and solvent baths. Blue Block Out™ is easy to apply and removes cleanly from frames and mesh with no adhesive residue. Ideal for wooden screens.

Pallet Protek™

Pallet Protek™ is a standard weight saturated smooth paper tape with heat resistant adhesive. Cleaning up messy spray adhesive from your pallet is time consuming and costly. It's also unnecessary. By covering your pallet with Pallet Protek™ and spraying the paper tape instead of the pallet, press clean up time is simply a matter of removing and discarding the tape. The whole process is fast and easy.

HotMask™

HotMask® series of self-wound polyester transfer tapes are designed to protect printed heat transfer material from the high temperatures of heat pressing. Available in different tack levels, HotMask® transfers print and cut graphics from the carrier film and aids alignment of the graphic. HotMask® is compatible with all brands and types of printable HTV (heat activated media).

Applications

Block Out Film Tape:

Screen printing
Wooden frames

Pallet Protek Paper Tape:

Textile screen printing

HotMask:

Printed Flock Films
Polyurethane Films
Vinyl Films
